RE: Facility For Sample Notice at 12345 Somewhere

Reference #: **4C5-DA5-A9E**

Dear Water Customer,

A Cross Connection Control inspection was performed at your facility. At that time, it was determined that your facility's potable water system is "contained" by an approved, properly installed backflow prevention device or assembly at the main inlet which is intended to minimize the potential backflow threat to the Town of Kilmarnock's public water system. Therefore, your facility has met the intent of the inspection portion of the Cross Connection Program as defined in the local Ordinance. Compliance with the inspection portion of the program requirements shall remain in effect until your facility's next scheduled inspection date.

However, to fully meet the intent of the CCC Program, two- (2) items must be addressed:

1. Inspection of the facility: Completed.
2. Successful annual testing of any existing testable backflow prevention assemblies within your facility.

This facility will be in Compliance with the Cross-Connection Control Program when the existing backflow prevention assemblies are tested this year and at yearly intervals thereafter. When it is necessary to test such assemblies, your facility will receive a notification letter in the mail. Testing of backflow prevention assemblies must be completed by a State-approved certified tester. A partial listing of testers available in your area can be viewed on HydroCorp's website at findbackflowtester.com. Following completion of testing and/or repairs, all test results must be entered electronically by your plumber &/or certified tester at gethydrosoft.com.

Note, however, it is still possible for existing cross-connections within your facility to potentially affect the water quality within your internal plumbing system. The installation of an approved backflow preventer at the main inlet does not relieve your facility of the responsibility of providing potable water to your employees and the public. In order to comply with all applicable codes and laws, it is recommended that your facility:

- Have a cross-connection control survey of the potable water piping system performed within your facility.
- Ensure all piping systems downstream of the containment device/assembly are labeled properly.
- Ensure backflow prevention assemblies connected to the potable water supply within your facility are tested annually.

We appreciate your cooperation in helping to protect our community's drinking water supply. If you have any questions or need further assistance, please contact **HydroCorp** at **1-844-493-7641** (available Monday through Friday, 8 AM - 8 PM EST) or visit watercustomer.com.
