RE: Facility For Sample Notice at 12345 Somewhere

Reference #: **4C5-DA5-A9E**

Dear Water Customer,

The purpose of the **Town of Kilmarnock's** Cross Connection Control Program, as established by local ordinance, is designed to protect the public water distribution system from potential contamination. This program consists of two key components: (1) site inspections and (2) testing of backflow prevention assemblies.

An inspection of your facility's internal water distribution system was conducted on **N/A**. Inspectors reviewing your water system identified connections that could potentially contaminate the public water distribution system. Enclosed, you will find a list of required corrective actions.

All required modifications must be completed using only **State-approved backflow prevention devices**. A **licensed plumber** can assist in obtaining and installing these approved devices. Additionally, some backflow prevention assemblies require testing by a **State Certified Tester**. We recommend hiring a licensed plumber who is also state-certified to perform this testing. Please note that all testable assemblies must be tested **immediately upon installation**.

To ensure compliance, all required corrective actions must be completed by **10/22/2025**. Once the necessary installations and modifications have been made, please contact **HydroCorp** at the number below **on or before the deadline** to schedule a compliance inspection.

Immediate Action Required

**This is the 3rd & final notice you have been sent regarding this matter.
Failure to comply could result in termination of water service &/or fines.**

We appreciate your cooperation in helping to protect our community's drinking water supply. If you have any questions or need further assistance, please contact **HydroCorp** at **1-844-493-7641** (available Monday through Friday, 8 AM - 8 PM EST) or visit **watercustomer.com**.
